traversing systems

contemporary ■ functional ■ innovative

Feather-light movement of your curtain: thanks to specially coated running channels. The optional cord between the sliders guarantees a perfect sine wave.

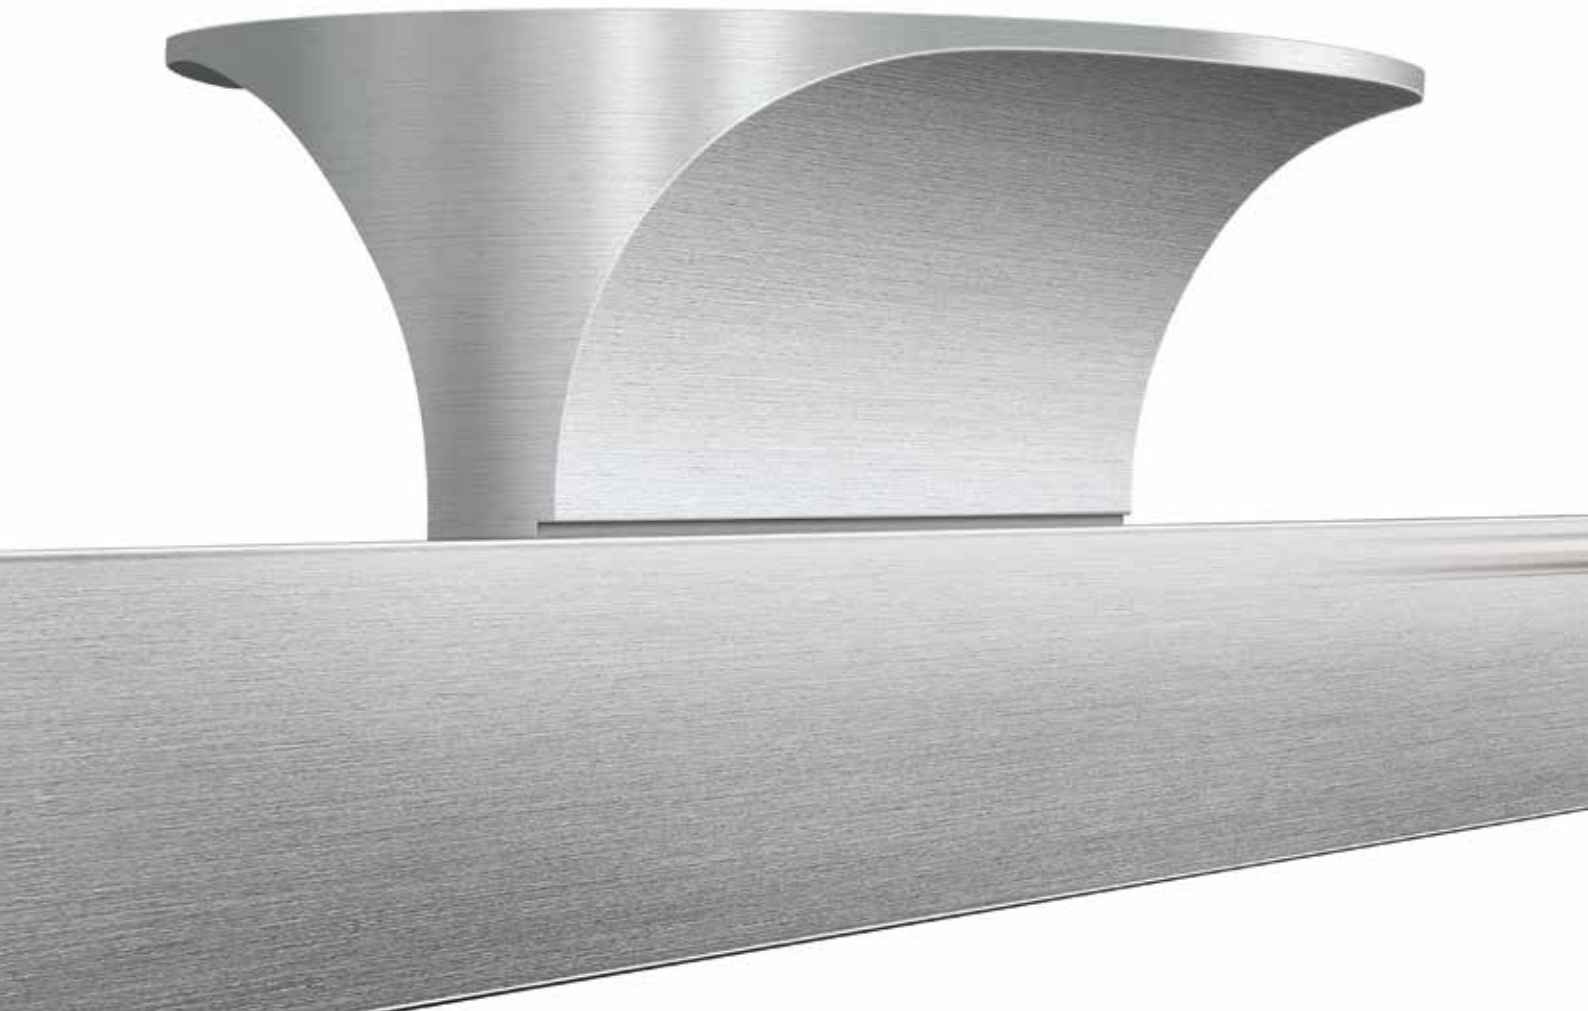

WING

interstil integral

An intersil patent – worldwide.

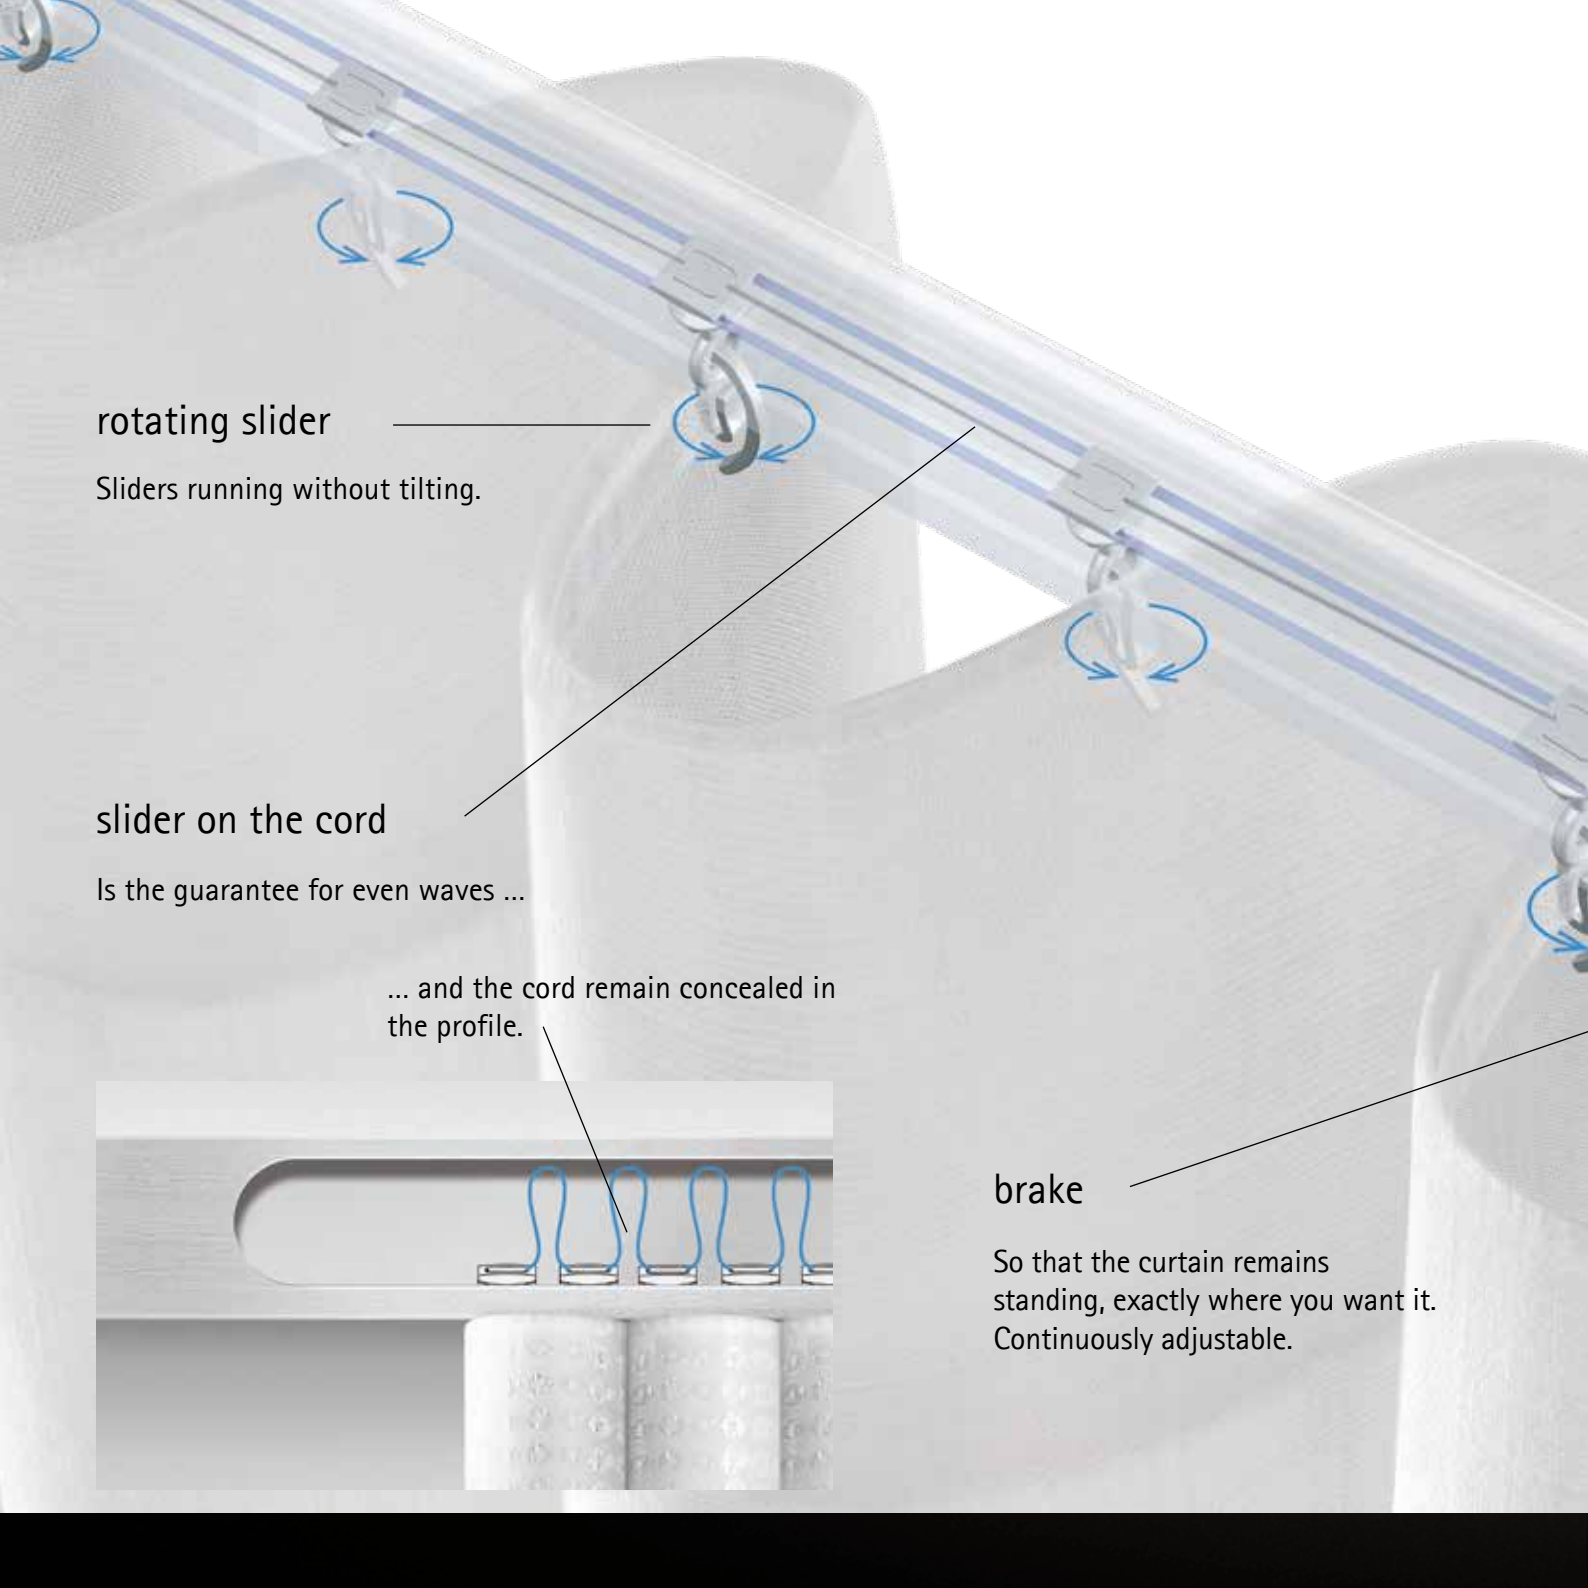

innovative ■ unique ■ patented

A three metre long traversing rod with only one bracket in the middle? - The innovative interstil integral makes it possible! Whether with a classical curtain rod, a curtain rod with centre bracket or now also available as traversing rod with centre bracket - the interstil integral allows for a greater span width in every case. The complex and completely hidden mechanism of this innovative technology lifts the rod until it is 100% level. Continuously, in no time at all, effortlessly easy.

outlook.4

interstil integral

An intersil patent – worldwide.

Curtain poles with integrated structural reinforcement: concealed inside the pole is a hardened steel wire which is held under tension in an off-centre position by a screw at each end. The lever forces generated by this raise the pole until it is 100% straight without transferring the forces to the brackets.

The result: span widths of up to 400 cm without a central bracket for more freedom of movement – ideal for large window fronts. Can be used in almost all interstil curtain poles.

designer rings

Between chic and casual. As an alternative to the classic style of decoration, these designer rings make the crucial difference. Whenever the extraordinary is the right alternative...

Put movement into fabrics. Draw rods allow you to open and close your curtains without touching them, matching the design of your poles. They let you protect what you love – a stylish and elegant solution..

For fine accenting and secure holding. The holdback encloses the material in a safe grip.

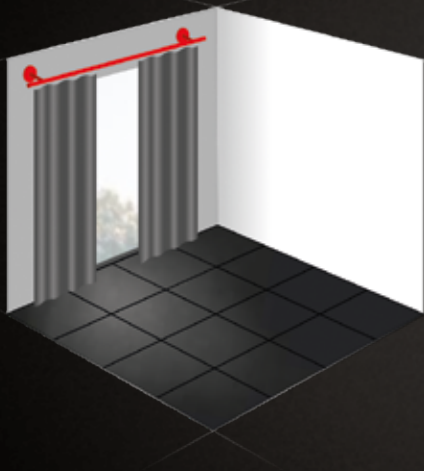

solutions for every room

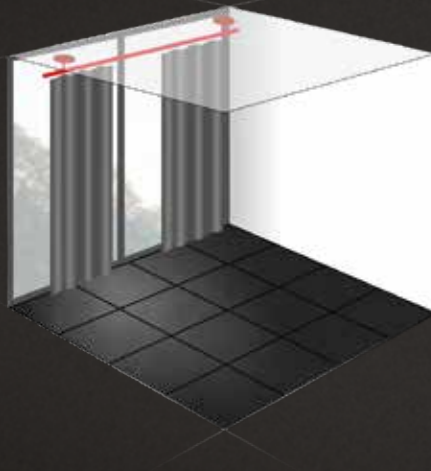

individualisation

Space solutions

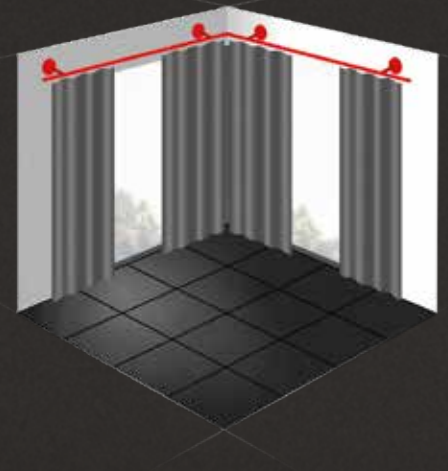

Every room is different. Highly-developed fastening systems, an unmatched number of bracket lengths, fastening variants and special functional components and our own individual assembly through to the production of special parts ensure that your "interstil" is installed in your rooms, offering exact fitting, style and functionality.

finishes

A truly brilliant finish can only be produced with great attention to detail. This is why we have equipped our production facilities with machines we have developed ourselves, in-house. This lets us handle the widest range of components while applying the same processes. We set the market standard with this degree of consistent colour reproduction.

pure design

pure design

pure design

Our products are characterised by a distinctive and unmistakable design style. Clear, unambiguous and expressive. A collection full of highlights, which has collected more than 30 awards from renowned national and international design competitions. This is pure design – at it best.

WING

The award-winning interstil products originate from the pen of Frank Greiser. For over 10 years, we have been working together to achieve what makes interstil stand out today: Innovation

„I have the aspiration to
create a clear product.
That is only achieved
when there is no more
compromise.“

Good design is no coincidence.

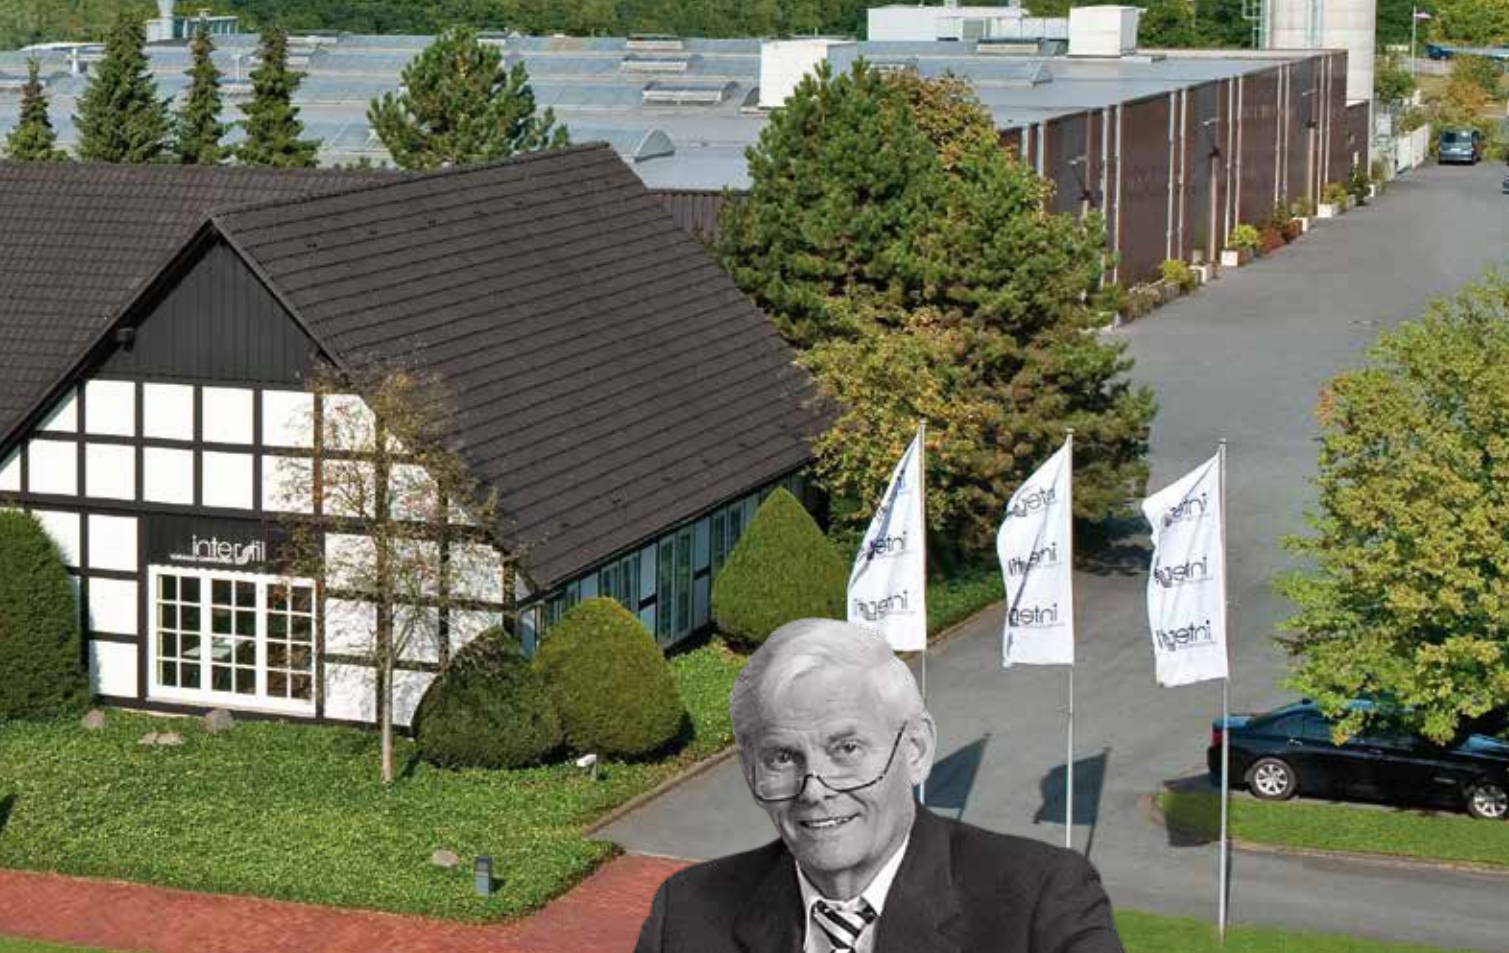

made in Germany

family business

Responsibility for the result We do not require a trip around the world for our production, instead we have created an environment in east Westphalian Steinhagen, where we can develop our successful innovative ideas further – passionate and down to earth.

Manfred Diedrichsen

Our custom production lines enable us to apply precise grooves and transformations to the individually bespoke length.

Perfect details

The result:
No caps – pure design.

Many parts are milled from the whole.
We produce the components with our own devices using high speed CNC machine tools.

Uncompromising precision

The result:
perfect appearance and precise assembly
technology.

Equipment for coating the tracks.
A development out of our special mechanical engineering department.

Perfect gliding properties

In an additional step, we apply a sliding coating to the running channels of our rods using a process we have developed ourselves.

Cleanly separated:

Outside stylishly brushed ...

... inside gleaming.

This makes it particularly easy to move your curtains. Long-term.
